### What students say about our courses:

"Entire course was great and beneficial. I have been in this business for a long time, I will definitely, change the way I do some things. I have become too complacent and this course was a wakeup for me! learned a lot"

"I was surprised about how much I learned about something I had been doing for years and how well the course was taught. I stayed awake and had fun!"

The Air Medical Crew Core Curriculum© Program is a 4 day, 32 hour program that covers rotor and fixed wing air medical transport. The entire program emphasizes safety, communication, the importance of PR and how to build a competitive resume. Crew integration and a real world perspective on the industry is brought to the classroom through our internationally experienced faculty. The course use Guidelines for Air Medical Crew Education and National Guidelines for Air Medical Transport plus supplemental materials. Our professional interactive training techniques uses adult learning concepts so everyone participates in numerous group learning activities during the 4 days.

"This course is only for those who want to  
**learn the most to become the best**  
in the Air Medical industry."

Diane F. Fojt  
President, MECA, Inc.
