Different programs have different needs. Depending on the mission type, accident history, crew configuration, location of dispatch and maintenance, the participants' needs vary. When we provide a AMRM course to our clients we interview the client program and customize the training experience to maximize safety, learning outcomes and information retention.

Everyone participates: Administrators, Directors, flight crew, maintenance personnel, marketing, communication specialist, and anyone else who has influence over flight program operations.

"This course is only for those who want to
learn the most to become the best
in the Air Medical industry."

Diane F. Fojt
President, MECA, Inc.
